ADEDIRAN KINDNESS

Full-Stack Software Developer

Lagos, Nigeria | adedirantreasure18@gmail.com | github.com/AdediranKindness
linkedin.com/in/adediran-kindness-63480440b | +234 907 677 3538

PROFESSIONAL SUMMARY

Full-stack software developer who builds complete web applications from database schema and authentication through responsive UI, automated tests, and deployment. Strong in Next.js/React/TypeScript and Python/Django, with hands-on experience in multi-tenant platforms, real-time systems, REST APIs, payments, and role-based access control. Comfortable owning a product end-to-end and documenting it for handover.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL, GDScript, HTML5, CSS3

Frontend: React 19, Next.js 15 (App Router), Tailwind CSS, Vite, Responsive Design, PWA/Offline Support

Backend: Node.js, Express, Django 5, REST APIs, WebSockets, Prisma ORM, Authentication & RBAC

Databases: PostgreSQL, SQLite, MySQL

Integrations: Paystack, Google Gemini API, Google Maps, Termii SMS, SMTP

DevOps & Tools: Git, GitHub, Docker, Docker Compose, Vitest, Render, Netlify

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer — Independent / Freelance

2025 – Present

Lagos, Nigeria (Remote)

- Designed and shipped **WorkDeck**, a multi-tenant work-order platform for maintenance and facilities teams, using Next.js 15, React 19, TypeScript, Prisma, and PostgreSQL/SQLite; modelled an 18-model schema and a four-role permission system.
- Built the full work-order lifecycle, manager sign-off, preventive-maintenance scheduling, audit trail with 30-day restore, CSV export, PWA/offline mode, and a documented REST API with hashed, revocable keys.
- Centralised permissions, plan limits, and status rules in shared domain and query layers used by the UI, server actions, and API; added scrypt password hashing, rate limiting, account lockout, upload validation, six Vitest suites, and Docker Compose/PostgreSQL deployment.
- Built **WorkSynch**, a real-time field-operations and fleet-dispatch platform (React 19, TypeScript, Express, WebSocket) with 45+ REST endpoints, bcrypt authentication, live vehicle tracking, backup/restore tooling, and Gemini-powered routing insights.
- Delivered **Amala Hey** (Next.js, Paystack) and **Oven Fresh** (Django), covering restaurant ordering with card payments and a bakery storefront with a custom admin panel, order-stage workflow, and SMS/email rider notifications.

KEY PROJECTS

WorkDeck — Multi-Tenant Work-Order Management Platform

Next.js 15 · React 19 · TypeScript · Prisma · PostgreSQL / SQLite · Tailwind CSS · Vitest · Docker

- Built dashboards, work-order boards, sites and assets, asset failure history, preventive maintenance, team management, analytics, and PWA/offline support for field-service teams.
- Implemented owner, manager, technician, and requester roles; plan-based feature gating; and per-tenant query scoping that returns the same 404 for foreign records as for missing ones.
- Added manager approval workflow, append-only activity timeline, 30-day audit restore, hashed REST API keys, CSV formula-injection protection, and Docker/PostgreSQL deployment documentation.

WorkSynch — Real-Time Field Operations & Fleet Dispatch

React 19 · TypeScript · Express · WebSocket · Google Gemini · Vite · PWA

- Built a multi-user dispatch platform covering jobs, workers, vehicles, live tracking, route maps, notifications, leave, and history, broadcasting state to connected clients over WebSocket.
- Added bcrypt authentication, admin session tokens, role-gated endpoints, import/export, storage snapshots with restore, and an offline-capable PWA; split the React frontend from the Express backend for independent deployment.
- Integrated Gemini 2.5 Flash with Google Maps grounding for live fleet routing advisories, with a deterministic fallback when no API key is present.

Amala Hey — Restaurant Ordering & Delivery Platform

Next.js 15 · React 19 · TypeScript · SQLite · Paystack · Recharts

- Built a restaurant platform with menu, cart, checkout, customer accounts, order tracking, reservations, and separate manager, admin, and delivery-agent dashboards.
- Integrated Paystack payment initialization, verification, and webhooks; added HS256 JWT cookie sessions, role-based authorization, delivery-fee rules, and Recharts analytics.

Oven Fresh — Bakery E-Commerce & Order Management

Django 5.2 · Python · SQLite / PostgreSQL · WhiteNoise · Render

- Built a responsive Django storefront with an animated landing page, filterable menu, product pages, session basket, checkout, order history, and printable receipts.
- Developed a custom staff dashboard for product CRUD, five-stage order management, and rider assignment with SMTP email and Termii SMS notifications; prepared a Render deployment with PostgreSQL, WhiteNoise, and an idempotent seed step.

ADDITIONAL PROJECTS

- **ChatApp — Real-Time Messaging Platform** (Django, Django Channels, WebSocket): Direct and group chats with media/voice messages, per-recipient delivery and read receipts, typing indicators, presence, 24-hour statuses, and call tracking.
- **WAHALA LIFE — Multiplayer Browser Game** (Node.js, Express, Socket.IO): Real-time multiplayer game with salted PBKDF2 passwords, a persistent economy, property upgrades, random city events, and synchronized player state.
- **Clothbrand — Fashion E-Commerce Frontend** (Next.js 15, React 19, TypeScript, Tailwind CSS): Responsive brand site with lookbook, collections, product detail, cart/checkout flow, and generated sitemap and robots metadata.
- **SecureDoc Vault — Document Manager** (Django, SQLite): Per-user document vault with category filtering, expiry warnings, file cleanup on delete, and a custom admin dashboard.
- **PillGuard — Medication Interaction Checker** (Django, SQLite): Drug and supplement interaction checker with severity levels, a custom user model, and authenticated medication history.
- **Keke Rush — 2D Endless Runner** (Godot 4.6, GDScript): Three-lane runner with smooth lane movement, obstacle collisions, coins, distance scoring, and game-over handling.

EDUCATION

Software Development Training — Uptech Academy (UCTA)

Lagos, Nigeria

Intensive full-stack program covering HTML5, CSS3, Bootstrap, JavaScript/jQuery, Python, Django, and MySQL.
